

Monthly Summary Report: **30 June 2023**

Summary Risk Indicator

Lower Risk Higher Risk

1	2	3	4	5	6	7
---	---	---	---	---	---	---

The risk indicator is based on the assumption that you will hold the product for the recommended period of 3 years.

Investment Objective

To provide investors with income and long-term growth of capital. The Fund combines a global, value-based selection approach with a multi-asset allocation strategy, unrelated to benchmark constraints. The Fund is actively managed relative to the benchmark and its purpose is to provide investors with long-term capital growth.

Investment Strategy

The Fund focuses on a portfolio of equities and bonds. The strategic allocation is characterized by flexibility and selectivity based on the disciplined analysis of fundamental data. In times of market uncertainty the Fund can maintain higher cash levels in order to protect its performance

Fund Details

Fund Size (M):	€ 30.801
Net Unit Price:	€ 10.8461
Inception Date:	30/9/1994
Licence Nr. Gov. Gazette B'	675/08-09-1994
Benchmark:	Blended Index
Base Currency:	Euro
ISIN:	GRF000090008
Bloomberg Ticker:	HSBCGRB GA
Minimum initial Investment:	€ 1,500
Commission: Subscription up to 0.30%**	
Commission: Redemption 0%	
Management Fee: up to 1.25%	

**Commissions negotiable according to the official commissions pricelist posted on www.triton-am.com

Performance fee

Up to 15% on any positive difference between the performance of the NAV per unit and the performance of the Blended Index

From 01/01/2022 the performance fee will be calculated and paid, if an outperformance has been achieved relative to the benchmark even in periods of negative returns, while it will not be calculated or paid if it underperforms relative to the benchmark, even in periods when the return on the Fund is positive

The performance fee is calculated in accordance with ESMA's guidelines on performance fees in UCITS and certain types of AIFs (34-39-992) as they have been applied and incorporated into the supervisory framework of the Hellenic Capital Market Commission from 1/1/2022.

Fund Performance

EXAE	1.84%

DERIVATIVES 17.17%

Quarterly Commentary

In the United States, the S&P 500 index closed the semester with a gain of +15.91%, mainly driven by the stocks of technology companies and expectations of a smooth landing for the U.S. economy in the current high-interest-rate environment. The NASDAQ index strengthened by +31.73%, recording its best performance since 1983, although it remains 14% below the high levels of November 2021. In Europe, the EuroStoxx index closed the semester with a positive return of +11.40%, despite macroeconomic data such as announcements regarding second-quarter GDP and the PMI index contributing to a decline of -0.10% in the second quarter. In bond markets, the easing of concerns about the banking sector, combined with higher-than-expected inflation figures and ongoing indications of a smooth economic landing in the United States, led to an upward revision of investors' expectations regarding interest rates. In the U.S., the yield of the ten-year bond stood at 3.87%, while in Europe, the German Bund reached 2.45% on June 30th, and the Greek ten-year bond reached 3.67%. In this context, the TRITON Balanced Fund achieved a performance of +11.11%, while its benchmark index recorded a return of 5.84% over the same period.

Key risks

The Mutual Fund is subject to Investment risks and Other associated risks from the techniques and securities it uses to achieve its objective. The table on the right explains how these risks relate to each other and the Outcomes to the Unitholder that could affect an investment in the Mutual Fund.

Investors should also read Risk Descriptions in the Prospectus for a full description of each risk.

Investment risks

Risks from the Sub-Fund's techniques and securities

Credit	Liquidity	Counterparty	Derivatives (Leverage)
An important part of the investment is held in debt securities, which are characterized by strong asymmetry of returns. They combine the probability of small return from the interest rate fluctuation with the probability of loss much of the investment due to inability to meet obligations of the issuer.	Attempting to liquidate a security in a market where there is no corresponding demand, it may cause large fluctuations at the price of the title. Highly traded securities pose less risk liquidity.	The fund could lose money if an entity with which it does business becomes unwilling or unable to honor its commitments to the Sub-Fund.	The market risk in derived products is larger and more complex. The big price volatility of a derivative financial instrument due to the fact that a small movement in the price of the underlying security, index, can lead to a significant move in the price of the derivative instrument.
