

TRITON Pan-European International Equity Mutual Fund

Monthly Summary Report: 30 June 2023

Summary Risk Indicator

Lower Risk → Higher Risk

The risk indicator is based on the assumption that you will hold the product for the recommended period of 5 years.

Investment Objective

The investment objective of the Pan-European International Equity Mutual Fund is to provide the unit holder with capital growth, by investing mainly in stocks of the European Markets. The Fund is actively managed relative to the Benchmark and its purpose is to provide investors with long-term capital growth.

Investment Strategy

The Fund invests mainly in large-cap and liquid stocks of companies listed in main European Markets. The selection of these stocks is based on a variety of criteria regarding the fundamentals of the selected company, the earnings growth prospects, the quality and effectiveness of management teams and market valuation.

Performance fee

Up to 15% on any positive difference between the performance of the NAV per unit and the performance of the STOXX Europe 50 Price EUR index. From 01/01/2022 the performance fee will be calculated and paid, if an outperformance has been achieved relative to the benchmark even in periods of negative returns, while it will not be calculated or paid if it underperforms relative to the benchmark, even in periods when the return on the Fund is positive. The performance fee is calculated in accordance with ESMA's guidelines on performance fees in UCITS and certain types of AIFs (34-39-992) as they have been applied and incorporated into the supervisory framework of the Hellenic Capital Market Commission from 1/1/2022.

Fund Performance	As of	30/6/2023	Full Calendar year			
Cumulative Performance (%)	YTD	1 Year	*3 Years	*5 Years	*10 Years	*Since Inception

Quarterly Commentary

European stock markets had a return of +0.89% (Stoxx Europe 600 index) in Q2 2023. The main reasons for the sideways movement were that despite the continued gradual deceleration of inflation, central banks continued to communicate to markets their intention to further interest rate hikes until inflation falls to the 2% target. Other reasons were China's relatively weak recovery after the re-opening from a prolonged covid lockdown and the negotiations on the increase or not of the US debt ceiling. In the last days of July better macroeconomics from the US and expectations of government stimulus in China drove European markets higher. Corporate results were better than expected, but were less impactful than macros. The Triton Pan-European mutual fund recorded a return of +3.42% in Q2 2023. The new benchmark "Stoxx Europe 50" recorded a return of +1.59% in the same time period.

www.unpri.org**Key risks**

The Mutual Fund is subject to Investment risks and Other associated risks from the techniques and securities it uses to achieve its objective. The table on the right explains how these risks relate to each other and the Outcomes to the Unitholder that could affect an investment in the Mutual Fund.

Investors should also read Risk Descriptions in the Prospectus for a full description of each risk.

Investment risks

Risks from the Sub-Fund's techniques and securities

Market	Liquidity	Derivatives (Leverage)	Credit
The fund is subject to normal market fluctuations and the risks associated with investing in securities markets. The value of your investment and the income from it may be affected by general economic and political factors as well as industry or company specific factors.	The fund operates in a market characterized by low trade volumes and securities that may become illiquid. This results in a higher risk of losses due to reduced trading speed/efficiency and sharper price fluctuations.	The derivatives market introduces significant levels of complexity, increasing the probability of adverse gains or losses to the fund that holds derivatives. The higher sensitivity to price movements of the underlying asset can asymmetrically affect the price of a derivative that is linked to it.	Exchange rate fluctuations may negatively impact the value of investments designated in another currency. Adverse movements in currency exchange rates could result in a decrease in return and a loss of capital. It may not be possible to successfully hedge against the currency risk exposure in all circumstances.
